

Applications of ICT

Department: Mechanical Engineering
Class: First Year A Group

Introduction to ICT

- ICT stands for Information and Communication Technology.
- It includes computers, networks, software and digital communication.
- ICT helps us create, store, process and share information.
- It is an essential part of modern life and work.

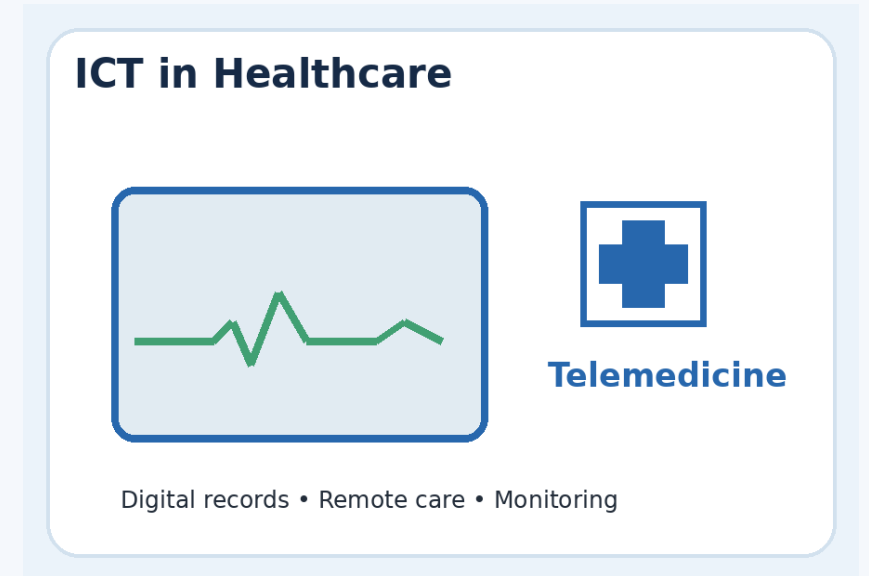

ICT in Education

- Online classes and virtual learning
- Learning Management Systems (LMS)
- Digital libraries, e-books and educational videos
- Online examinations and assignments
- Interactive simulations and smart classrooms

ICT in Healthcare

- Electronic health records
- Telemedicine and online consultations
- Digital medical imaging and diagnosis
- Hospital management systems
- Health-monitoring and wearable devices

ICT in Business & Banking

- Online banking and digital payments
- E-commerce and online shopping
- Video conferencing and remote collaboration
- Customer relationship management
- Digital marketing and data analysis

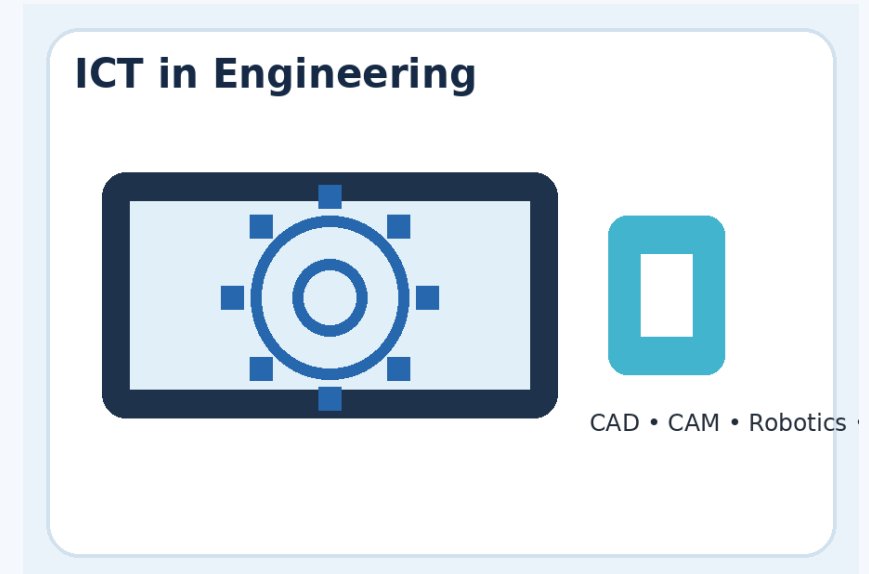

ICT in Government

- E-government services
- Online applications and registrations
- Digital records and databases
- Online tax and payment systems
- Public information and service portals

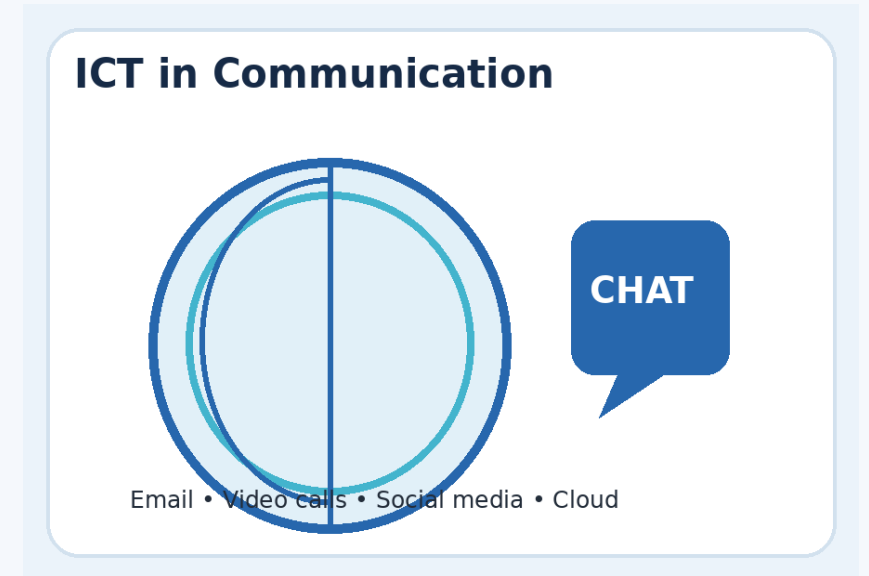

ICT in Engineering & Industry

- Computer-Aided Design (CAD) and 3D modelling
- Computer-Aided Manufacturing (CAM)
- Industrial automation and robotics
- Engineering simulation and analysis
- Internet of Things (IoT) and smart factories

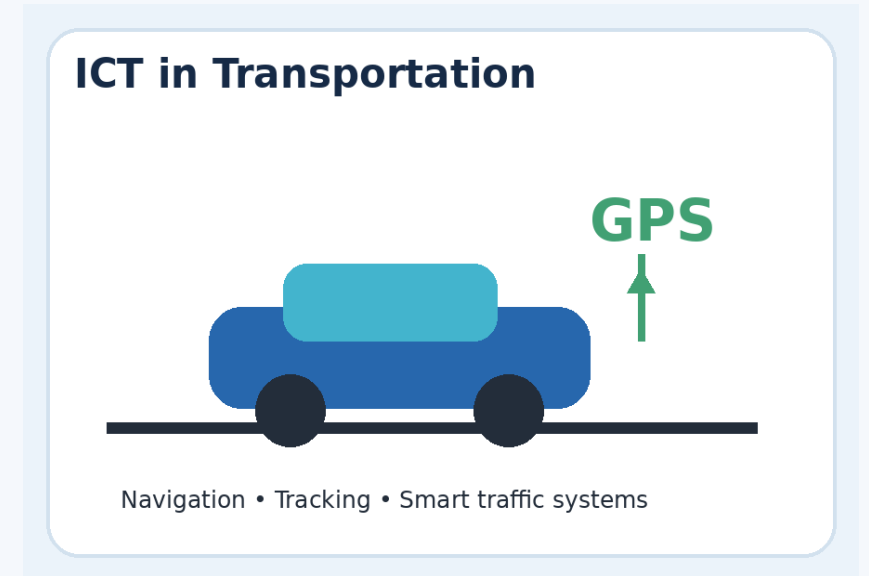

ICT in Communication

- Email and instant messaging
- Social media platforms
- Video calls and online meetings
- Cloud-based collaboration
- Fast communication across the world

ICT in Transportation

- GPS and digital navigation
- Online ticket booking
- Traffic-management systems
- Vehicle tracking and fleet management
- Smart and autonomous transportation technologies

Advantages of ICT

- Faster and easier communication
- Quick access to information
- Saves time and resources
- Improves productivity and efficiency
- Supports remote work and learning
- Connects people globally

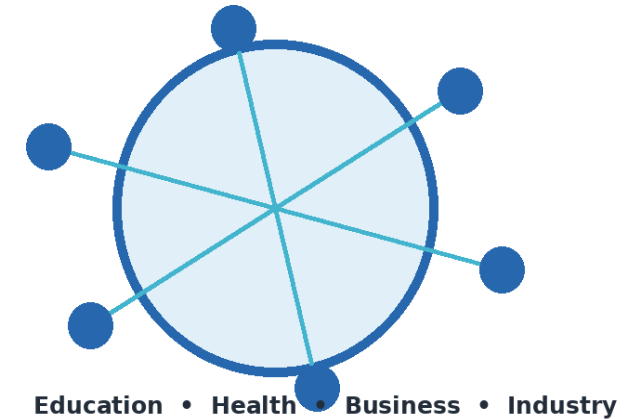

Challenges of ICT

- Cybersecurity threats and hacking
- Privacy and data-protection concerns
- Digital divide and unequal access
- Internet dependency
- Misinformation and fake content
- Cost of advanced technology

Conclusion

- ICT has become an essential part of modern society.
- It improves education, healthcare, business, government and industry.
- It makes communication faster, easier and more efficient.
- ICT is helping create a smarter and more connected world.
- Thank You — Questions?

Connected World
